Unit Project | Photoshop Layers

Create THREE exciting posters of your masked person/animal from the masking Photoshop project (three for each) by using layer masks, gradients, filters, the type tool, and layer effects.

All must have:

- The dimensions of 1920px x 1080px (landscape)
- 72 pixels/inch resolution
- A masked copy of your person/animal as a smart object
- Text with layer styles added to each
- Layer Styles on a layer other than the text (e.g. the masked layer)

At least one must have:

- A gradient layer
- A different background (i.e. a different pic of the animal, a logo, the woods, etc.)
- A filter (first make that layer a smart object)

Other notes:

- 20% of the grade will be based on how cool the posters look. In other words: Would I buy this poster at the store?
- If you are missing **any** of the above requirements you will **not** receive an A
- Save the files with the file type .jpg and submit
    - There will be a 10-point deduction if the files are not the correct format
